11. TOXICOLOGICAL INFORMATION:

**ACUTE ORAL:**

**ACUTE DERMAL:**

**ACUTE INHALATION:** Product is corrosive to skin and eyes, avoid skin and eye contact. Bentazone and Flumetsulam have low to moderate toxicity and bentazone is a weak acid, moderately irritating to skin and eyes.

**OTHER TOXICITY INFORMATION:**

Aquatic Toxicity: LC50 (96h) fish & daphnia; >100 mg/L (Bentazone tech).

EC50 (72h) green algae; 47 mg/L (Bentazone tech).

Soil Toxicity: Soil DT50; 25 days (Flumetsulam tech).

In animal studies, Flumetsulam is rapidly cleared via urine and faeces with no metabolites and Bentazone is poorly metabolised.

In soils Bentazone firstly forms short-lived hydroxy compounds which rapidly undergo further degradation. The availability of Flumetsulam is principally dependant upon soil pH and organic matter and herbicidal activity increases as pH increases and organic matter decreases.
